## WASH & CARE

### Cotton

We recommend washing all our cotton products in 60°C. This temperature will stabilize the colours. All our colours, embroideries, buttons, zippers withstand the same temperature. Do not use a detergent which contains chlorine. We recommend that you do not tumble dry our products as it excessively wears on the textiles.

### Linen

Linen is a fibre that wrinkles naturally and should therefore not always be folded in the same way. The fibres might break and create lasting pleats. Unbleached linen should not be washed with detergent that contains optical whitener. Our linen products should not be tumble dried.

### Silk & wool

Silk or wool products could be machine washed in 40°C with a gentle program, but we recommend hand washing with a mild detergent or soap flakes. Ironing should be done at medium temperature. Never dry white silk or wool products in the direct sun light, as they might turn yellow. Our silk or wool products should not be tumble dried.

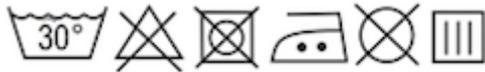

### Hand washing for silk & wool

Some unprocessed silk or wool products are marked “hand wash, max 40°C” or “Needs special care”. Do not leave these products to soak, but wash immediately very gently with a detergent intended for 40°C and rinse well. Leave them to dry on a flat surface.

### Coated fabric

Our coated cotton fabric has been protected by an acrylic micro film which prohibits stains to penetrate the fabric, and thus stay only on the surface. In case of a stain, try to intervene as soon as possible. Rub the stain gently with a clean sponge. Do not use an abrasive sponge since it could damage the coated surface. Add some liquid soap if needed. Exceptionally, machine wash at 30°C without tumble drying. Use detergent in a small quantity, no softener, and absolutely no chlorine. Hang dry. Do not dry clean. Iron on the backside of the coated fabric at a low temperature. Ironing will actually reactivate the treatment. The acrylic micro film does not protect the fabric against the sun rays. To prohibit fading of the colours, do not leave our coated fabric exposed to the sun.

### **Pre-washing**

Most of our cotton products have gone through a mechanical process which pre-washes the textile so that they will shrink less when first washed. This treatment, which entails no chemical additives, also makes for easier ironing. The articles in cotton that are not pre-washed are our ribbed table mats and runners, our rugs, the honeycomb towels, some bedspreads, all our jacquards and 100% linen items.

### **Filling**

The filling of the seat cushions, throws, eiderdowns and bedspreads (except our bedspreads DIAMOND, DUNE & QUILT which have 100% cotton filling) is in 100% polyester fibre for a better maintenance in the washing machine.
